

1. 放大器件供电用12V
2. 0x30读、写时15V稳压电路去两个二极管保护，VDD管脚电压仅为13.5V
3. 电压电流环路改变
4. FB管脚电容加大到1nF
5. PFCFB与RRA分压电路拆解
6. PFC改为10uF 100V
7. 电源管理电路的地？
8. 12V供电支路电容改为100uF

|                                                                                       |  |      |           |                                                                                                                                        |                                            |  |
